Men of Platinum - Campaign Launch ([Reel](#))

Medium: Adobe Illustrator

(Concept and Illustrations done by Tanaya Agarwal)

Now or Never ([Animation](#))

Medium: Adobe Illustrator & Adobe Premier Pro

Size: 2 x 2.5

5

Go deep. The deeper you go the more likely you will discover something of value.

38

Explore the other edge. Great liberty exists when we avoid trying to run with the technological pack. We can't find the leading edge because it's trampled underfoot. Try using old-tech equipment made obsolete by an economic cycle but still rich with potential.

14

Don't be cool. Cool is conservative fear dressed in black. Free yourself from limits of this sort.

26

Don't enter awards competitions. Just don't. It's not good for you.

30

Organization = Liberty. Real innovation in design, or any other field, happens in context. That context is usually some form of cooperatively managed enterprise. Frank Gehry, for instance, is only able to realize Bilbao because his studio can deliver it on budget. The myth of a split between "creatives" and "suits" is what Leonard Cohen calls a 'charming artifact of the past.'

15

Ask stupid questions. Growth is fueled by desire and innocence. Assess the answer, not the question. Imagine learning throughout your life at the rate of an infant.

23

Stand on someone's shoulders. You can travel farther carried on the accomplishments of those who came before you. And the view is so much better.

7

Study. A studio is a place of study. Use the necessity of production as an excuse to study. Everyone will benefit.

31

Don't borrow money. Once again, Frank Gehry's advice. By maintaining financial control, we maintain creative control. It's not exactly rocket science, but it's surprising how hard it is to maintain this discipline, and how many have failed.

24

Avoid software. The problem with software is that everyone has it.

6

Capture accidents. The wrong answer is the right answer in search of a different question. Collect wrong answers as part of the process. Ask different questions.

17

----- . Intentionally left blank.

33

Take field trips. The bandwidth of the world is greater than that of your TV set, or the Internet, or even a totally immersive, interactive, dynamically rendered, object-oriented, real-time, computer graphics- simulated environment.

21

Repeat yourself. If you like it, do it again. If you don't like it, do it again.

29

Think with your mind. Forget technology. Creativity is not device-dependent.

4

Love your experiments (as you would an ugly child). Joy is the engine of growth. Exploit the liberty in casting your work as beautiful experiments, iterations, attempts, trials, and errors. Take the long view and allow yourself the fun of failure every day.

36

Scat. When you forget the words, do what Ella did: make up something else...but not words.

10

Everyone is a leader. Growth happens. Whenever it does, allow it to emerge. Learn to follow when it makes sense. Let anyone lead.

28

Make new words. Expand the lexicon. The new conditions demand a new way of thinking. The thinking demands new forms of expression. The expression generates new conditions.

3

Process is more important than outcome. When the outcome drives the process we will only ever go to where we've already been. If process drives outcome we may not know where we're going, but we will know we want to be there.

9

BEGIN ANYWHERE John Cage tells us that not knowing where to begin is a common form of paralysis. His advice: begin anywhere.

37

Break it, stretch it, bend it, crush it, crack it, fold it.

40

Avoid fields. Jump fences. Disciplinary boundaries and regulatory regimes are attempts to control the wilding of creative life. They are often understandable efforts to order what are manifold, complex, evolutionary processes. Our job is to jump the fences and cross the fields.

19

Work the metaphor. Every object has the capacity to stand for something other than what is apparent. Work on what it stands for.

2

Forget about good. Good is a known quantity. Good is what we all agree on. Growth is not necessarily good. Growth is an exploration of limit recesses that may or may not yield to our research. As long as you stick to good you'll never have real growth.

42

Remember. Growth is only possible as a product of history. Without memory, innovation is merely novelty. History gives growth a direction. But a memory is never perfect. Every memory is a degraded or composite image of a previous moment or event. That's what makes us aware of its quality as a past and not a present. It means that every memory is new, a partial construct different from its source, and, as such, a potential for growth itself.

11

Harvest ideas. Edit applications. Ideas need a dynamic, fluid, generous environment to sustain life. Applications, on the other hand, benefit from critical rigor. Produce a high ratio of ideas to applications.

34

Make mistakes faster. This isn't my idea --- I borrowed it. I think it belongs to Andy Grove.

35

Imitate. Don't be shy about it. Try to get as close as you can. You'll never get all the way, and the separation might be truly remarkable. We have only to look to Richard Hamilton and his version of Marcel Duchamp's large glass to see how rich, discredited, and underused imitation is as a technique.

16

Collaborate. The space between people working together is filled with conflict, friction, strife, exclamation, delight, and vast creative potential.

8

Drift. Allow yourself to wander aimlessly. Explore adjacencies. Lack judgment. Postpone criticism.

12

Keep moving. The market and its operations have a tendency to reinforce success. Resist it. Allow failure and migration to be part of your practice.

43

Power to the people. Play can only happen when people feel they have control over their lives. We can't be free agents if we're not free.

25

Don't clean your desk. You might find something in the morning that you can't see tonight.

41

Laugh. People visiting the studio often comment on how much we laugh. Since I've become aware of this, I use it as a barometer of how comfortably we are expressing ourselves.

18

Stay up late. Strange things happen when you've gone too far, been up too long, worked too hard, and you're separated from the rest of the world.

39

Coffee breaks, cab rides, green rooms. Real growth often happens outside of where we intend it to, in the interstitial spaces --- what Dr. Seuss calls "the waiting place." Hans Ulrich Obrist once organized a science and art conference with all of the infrastructure of a conference --- the parties, chats, lunches, airport arrivals --- but with no actual conference. Apparently it was hugely successful and spawned many ongoing collaborations.

32

Listen carefully. Every collaborator who enters our orbit brings with him or her a world more strange and complex than any we could ever hope to imagine. By listening to the details and the subtlety of their needs, desires, or ambitions, we fold their world onto our own. Neither party will ever be the same.

13

Slow down. Every chronicle from standard time frames and surprising opportunities may present themselves.

20

Be careful to take risks. Time is genetic. Today is the child of yesterday and the parent of tomorrow. The work you produce today will create your future.

22

Make your own tools. Hybridize your tools in order to build unique things. Even simple tools that are your own can yield entirely new avenues of exploration. Remember, tools amplify our capacities, so even a small tool can make a big difference.

27

Read only left-hand pages. Marshall McLuhan did this. By decreasing the amount of information, we leave room for what he called our "noodle."

an incomplete manifesto for growth
